

WebIntelligence Changes

Later today the following WebIntelligence (Webi) changes will be moved into production:

Employer Record System (ERS) reports produced in Webi have been updated. Previously all sites or profiles were retrieved based on the specific report request. This included active sites and/or profiles as well as those marked for deletion, or marked as inactive. Now, only ACTIVE sites or profiles will be retrieved when requesting reports.

Three new ERS reports are available:

- **ERS New Company Sites by EXPOE** - This report contains new company sites that were created by the EXPOE quarterly update. The report is sorted by county, then by date created - most recent first, then alphabetically by Site Trade Name.

This report was created so local office staff can find the new company sites added in his/her county.

- **ERS New Company Profiles by EXPOE** - This report contains new company profiles that were created by the EXPOE quarterly update. The report lists all new profiles statewide by date.
- **ERS Single to Multiple Site** - This report contains companies that were reporting as single site employers and are now reporting as multiple site employers. The report is sorted by county, then by date created - most recent first, then alphabetically by Profile Legal Name.

Example: In ERS, do a Profile search for Mount Vernon Telephone Co. Click on the Site List for this company. The first site listed is the single site, which has been inactivated by EXPOE. The other (multiple) sites were created by EXPOE.
